Introduction & Acknowledgements

Postal forms & labels are integral part of every postal history collection and they help us to understand

better the routes, tariffs and other important information about the specific item of postal history .During

its seventy years history Israeli Post has issued a wide variety of different labels and forms its services. Al-

most each such label or form had a few printings or design changes throughout the years. Except a few articles almost no information was published about Israeli postal labels an forms . That is why I decided to

prepare a catalog in which all information known to me would be gathered.

The listings are based on the material from my collection or on information and images supplied to me

by other collectors. Most of the material in this catalog is published for the first time and was never cata-

logued before. Not all the known types of labels and forms are listed in this catalog because of lack of in-

formation or illustrations. Effort would be made to add the lacking information in the next editions of the

catalog. No claim as to completeness is being made. No doubt there are many types of labels and forms that are not listed. If you have in your collection items that are not listed, please send detailed infor-

mation (and scans if possible) to me at:

Genady Berman-P.O.Box 440-Holon-58103-Israel; e-mail: bermangenady@gmail.com. Thank you.

No effort to give evaluation or prices was made since the market of such material is extremely limited

and based mostly on supply and demand and almost no information on quantities that exist on philatelic market is known. Some information about the prices could be found in Bale catalog.

I'm gratefully acknowledge the following philatelists for their help, involvement ,advice in preparation of

this catalog and revealing me many additional sources of information:

From Israel: Dr. Joseph Wallach ,Mr. George Landsman, Prof. Ehud Yungwirth, Mr. Alon Cohen, Mr. Zvi

Tov.

From Netherlands: Mr. Jan ter Welle.

From the United States of America: Mr. Darus Greathouse

Genady Berman

Israel 2017

Logos of Israeli Postal Service

During its seventy years history Israeli Postal Service has changed its logo and name several times. Each time the such change occurred it had an immediate impact on the design of postal labels and forms. The different logos listed below.

ISRAEL POST LOGO—USED FROM 1948 TO THE BEGINNING OF 70 s'.

MINISTRY OF COMMUNICATIONS LOGO—USED FROM BEGINNING OF 70S' TO 1986.

משרד התקשורת

www.postil.com

<u>ISRAEL POSTAL AUTHORITY LOGO—USED FROM</u> <u>1986 UNTIL 2006 = IPA.</u>

ISRAEL POSTAL COMPANY LOGO—USED FROM 2006 = IPC.

REGISTRATERED MAIL LABELS

Registered mail describes letters, packets or other postal documents considered valuable or important and in need of a chain of custody that provides more control than regular mail. The posted item has its details recorded in a register to enable its location to be tracked during each stage of mail sorting process. The registration of letters as known today was introduced in 1841 in Great Britain. The letter had to be enclosed within a large sheet of green paper. The green sheet was addressed to the Post Office where the recipient lived. The green sheet was then used as a receipt and was returned to the office of origin after delivery. Traditionally, registered mail was a manual process which gave rise to a great variety of distinctive hand stamps and registration labels. Many countries have even issued special postal stationery for registered mail. Generally, the item was prepaid with the normal postage rate and an additional charge known as a registration fee. Upon payment of this fee the sender was given a receipt, and a unique numbered registration label was affixed to the letter. As the letter travelled from post office to post office and through any sorting office, it had to be signed for on a ledger and postmarked. This process was completed when the letter was delivered and the receiver signed for the item. In Israel registered mail service exist from the first day of operation of Israeli postal services. Remainders of the British Mandate registration labels were used for some years (even in mid 50s') until their stock was fully exhausted. In 1949 first attempts were made to introduce Israeli registration labels . At first remainders of British type blank labels were overprinted with bilingual locality description and short time after than new Israeli type label was designed. This design was used almost unchanged for fifty years until barcode registration labels were introduced.

RL 1a

RL 1b

RL 1c

RL 0- British Mandate type label printed in blue on white paper. Perf. Printed in H strips.

A-Blank without locality name.

- a)Perf. 13 with big serial number.
- b)Perf. 14.5 with big serial number.
- c)Perf. 13 with line below space for locality name & big seri-al number.
- d)Perf. 15 with small serial number.
- e) Perf. 15 specially overprinted for TABUL exhibition. With small s.n.

B- With locality name.

- a)Perf. 13. Font type 1.
- b)Perf. 14.5. Font type 1.
- c)Perf. 14.5. Font type 2.
- d)Perf. 15. Font type 3.With small s.n.
- e)Perf. 15. Font type 3 without prefix in serial number.Small

Those labels were used for a long time until stocks were fully exhausted . Examples are known even from the mid 50 s'.

RL 1- British Mandate labels overprinted with bilingual locality name and Hebrew "ר". Used for short time in 1949 -1950 in a few places.

- a)Perf. 13. With big s.n font.
- b)Perf. 14.5. With big s.n font.
- Perf. 15. With small s.n font.

RL 2- Israeli bilingual hebrew-english type used for 50 years until new barcode type labels were introduced. Printed in blue ink (diff. shades) on white paper. Printed in coils.

A-Blank without locality name . Top of "7" 4mm.

- a)With 4 digits in s.n.Perf. 11.
- b)With 5 digits in s.n.Perf. 11.

c)With 6 digits in s.n. With rounded corners .Printed on self adh. paper. Cream carrier paper.

B-Blank without locality name . Top of "\" 5mm.

- a)With 4 digits in s.n. Perf. 11.
- b)With 5 digits in s.n. Perf. 11.
- c)With 5 digits in s.n. Rouletted.
- d)With 6 digits in s.n. Rouletted.
- e)With 6 digits in s.n.Imperf. Printed on self adh. paper.

C- With locality name . Top of "7" 4mm.

- a)With 4 digits in s.n. Perf. 11.
- a)With 5 digits in s.n. Perf. 11.

D- With locality name . Top of "כ" 5mm.

- a)With 4 digits in s.n. Perf. 11.
- b)With 5 digits in s.n. Perf. 11.
- c)With 5 digits in s.n. Rouletted.
- d)With 6 digits in s.n. Rouletted.
- e)With 6 digits in s.n. Imperf. Printed on self adh. paper.

E – With locality name . Top of "ヿ" 5mm. 3 lines of text.

F – With locality name Small format with rounded cor-ners. Printed on self adh. Paper. Blue printing with black 5 digits number.

Many types of fonts were used for locality name. Since a few thousands labels exist their detailed listing would take many many pages. Only main types are listed here.

- **RL 3** As type 2 but without the line separating locality name and s.h. Printed in blue on white paper. Perf.11.
- a)3 lines text . With 4 didits s.n.
- b)3 lines text. With 5 didits s.n.
- c)4 lines text . With 4 didits smaller font s.n.

Labels of this type were used for mobile post offices & offices in different institutions like science centers, hospitals and airports.

RL 4- As type 2 but higher with trilingual text-Hebrew-Arabic-English.

A- Top of "¬" 4mm.

- a) With 4 digits in s.n. Perf. 11.
- b) With 5 digits in s.n. Perf. 11.

B- Top of "¬" 4mm.

- a)With 6 digits in s.n. Rouletted.
- b)With 6 digits in s.n.Imperf. Printed on self adh. paper.

Labels of this type were used for mobile post offices ,arab villages & offices opened in the territories occupied by Israel in 1967.

OFFICIAL REGISTERED MAIL LABELS

According to the official decree of the postmaster Mr. A. Rena dated September 3, 1966 and numbered 43/66 the Israeli post issued on January 4th, 1966 special labels for registered letters of different official government departments. Their status of being real also a real stamps and not only simple registration labels can not be doubted because:

1)They were sold to the official departments in advance in rolls of 500 or 1000 labels for the price of the postage + registration fee (less "Defense Stamp"). Sales were executed only in full rolls and only against money transfer (not cash).

2)They ought to be cancelled by a date postmark like any other stamps, though this was not always done in daily practice. Although those labels can be fully considered as official stamps they are not listed in any modern catalog and many collectors even don't know about their existence.

Those labels were first issued in a "big" format - frame size 38 x 21 mm. During the seventies (exact date is nor known) some of the labels were also issued in a smaller size 38 x 18 mm. The perforations remained the same .Those labels were sold in rolls of 100. Some of the labels were issued roulette instead of perforated.

Three variations of green color are known, but since since it was no strict control during the printing it can be expected that all the labels may possibly have many shades. The three main shades that can be found are: olive, bluish-green, dark green. Two paper types were used for printing:

A- light creamy paper. Occurs mostly with with olive print.

B- pure white paper.

Cancellation of those labels occurred in different ways. Very often the labels were not cancelled at all. Sometimes they were cancelled by hand (ball pen) & most frequently they were cancelled by regular postmark or official cachet. On the blank labels the name of the locality was written by hand in Hebrew or in scarcer occasions marked by a little violet rubber stamp in Hebrew only. In most cases the name of the locality was not written or marked at all & the only way to verify the locality is by a postmark on the envelope.

Yellowish & pure white papers

Label cancelled by official cachet

Label cancelled by regular postmark

Label used on tag of registered mail bag-latest known date

It is now known exactly when the use of official registration labels was stopped, but the latest date in my collection is 14.3.86 & it was used on mail bag tag sent from the Philatelic Services in Jaffa to Bat Yam GPO. I have also seen label imprinted on IDF official envelope used even in 1987, but possibly it was use of remainders. I think that the use was possibly stopped with the establishment of Israel Postal Authority in 1986.

Those labels were also sometimes imprinted directly on the envelopes making it some kind of official stationary. Payment in advance for printing such stationary had to be made like in the case of regular labels. Generally the imprinted models were larger & in most cases they were not cancelled by a postmark since it was harder or almost impossible to reuse them. Most of the known examples of such stationary is from official institutions in Tel Aviv & IDF, but examples from Haifa are also known. Examples from other cities possibly also exist. The color of the labels imprinted on stationary was not often green & examples printed in red or even black are known.

IDF stationary with imprinred label

Another IDF example in printed in red

Philatelic Services stationary example

Two examples of Bank of Israel stationary printed in green & black ink. A.R service also added.

BARCODE REGISTERERED MAIL LABELS

Traditionally, registered mail was a manual process which gave rise to a great variety of distinctive hand stamps and registration labels. Many countries have even issued special postal stationery for registered mail. . Today, however, the registration process is largely computerized with barcode registration labels replacing the traditional analog labels having only a printed serial number. In most countries, the use of registered mail require labels with a 13-digit reference number and corresponding barcode. This special 13 digit number standard was authorized by UPU for postal service in 1986, but even before trials took place in different places. The leading country in barcode introduction for postal use was Japan where the first mass emission of barcode registration labels was made in 1982. The use of barcodes to identify postal items has started gradually in different countries and was mainly driven by the development of EMS service. The first two letters of the 13 digit barcode indicate the kind of registration service (usually "RR") while the last 2 letters usually represent the country where the registered item was posted. E.g. RR913282511SG indicating Singapore or RR123456785IL indicating Israel. Such labels were first introduced in Israel in 1995 when the Postal Authority started a process of computerizing of it's mail delivery services but some experiments with barcodes were made even before . Following an experimental period various barcode labels were introduced for each kind of registered mail starting from April 1999 .

Generally, the item is pre-paid with the normal postage rate and an additional charge known as a registration fee. In Israel nowadays registration fee exists only for international mail & for internal mail special registered mail tariffs exist .Upon payment of this fee the sender is given a receipt, and a unique numbered *registration label* is affixed to the letter. As the letter travels from post office to post office and through any sorting office, it has to be signed for on a ledger. This process is completed when the letter is delivered and the receiver signs for the item. With computerization and barcode technology, much of the logging once done manually has become simpler and leads to greater options for the sender and receiver alike to access the status of their shipment via the internet. Israel Post provides tracing information for registered items on it's website.

Nowadays the following types of registered mail are known to be offered by Israel Post to it's clients:

<u>Regular registered mail.</u> The service is available for letters, postcards and printed matter up to 2 kg. inside Israel and abroad. Special barcode label type RRB is used for this service.

<u>Registered mail with advice of delivery</u>. The service is available for letters, postcards and printed matter up to 2 kg. inside Israel and abroad. With this service, the client can be sure that the recipient has received his shipment, as the sender will receive the original proof of receipt that the recipient has signed. Special barcode label type RAB is used for this type of mail.

<u>Registerd mail with scanned advice of delivery</u>. This service is similar to regular advice of delivery, but has two main differences. It can be used only for inland mail & the advice of delivery in not only sent to the sender by mail stream, but it also scanned and can be viewed on Israel Post website. Special barcode label type RCB is used for this type of registered mail.

<u>Military registered mail</u>. This kind of registered mail is intended only for registered mail of Israel Defense Forces and is used for sending mail to civil and government organizations, citizens and reservists. Barcode label type RRMD is used for this type of mail.

Registered mail with judicial delivery. This kind of registered mail was also invented especially for business clients of Israel Post such as law & notary offices. Barcode label type RSB is used for this kind of mail. The postman is visiting the recipient 3 times in order to deliver item sent by this kind of mail & in addition special advice of delivery is sent to the sender after delivery. This service is available inside Israel only. Before the advice of the delivery is sent to the sender advocate comes to the post office and the postman officially signs that he really has delivered the item to the recipient. Such advice of delivery can be used as official evidence in court. It is possible to ask the post office to search and find the address of the recipient if not known. It is done as additional service and in for this purpose special orange label is used. Real post items of this type of registered mail are extremely rare & I have not seen even one such item. As I know this service was possibly discontinued due to low demand.

Registered mail with combined delivery. This kind of mail was invented especially for big business clients of Israel Post. Barcode label type RIB is used for this kind of mail. Postman is visiting the recipient 3 times in order to deliver the item sent by this kind of mail & in addition special advice of delivery type is sent to the sender after delivery. The service is available only in Israel. Real post items of this type of registered mail are extremely rare & I have not seen even one such item.

<u>Foreign Incoming registered mail</u>. Incoming registered mail from most countries usually is not marked by Israel Post except for mail with damaged or not standard barcodes or registration numbers. Unfortunately Israel post refused to give me any information regarding this issue ,but I do know that 2 special barcode labels exist for this purpose:

- **-Type I label-** On this type the original item number given to it abroad is printed as is. As I understand it is done when the barcode is of standard type but has any damage which prevents the barcode reader from recognizing it.
- **-Type II label** -Comes as I know with already preprinted barcode ending with XX & as I understand this type of barcode is used when barcode is not of 13 digits standard or when old type registration label is present on the postal item.

AIR & PRIORITY MAIL SERVICE

Delivery of mails by air transport on a regular basis began worldwide about 100 years ago. Regular airmail service was first offered to the citizens by the postal authorities during the British rule in Palestine. Airmail service in the State of Israel began only a few days after the proclamation of independence. Until the Lydda airport was liberated, Haifa airport was used for sending and receiving airmail dispatches until November of 1948. Airmail is an auxiliary service available for letters, packets and parcels in addition to other auxiliary services like registration or advice of delivery. Since the fact that in recent years logistics traffic improved drastically ,the postal services have much more ways for sending mail fast , in a reliable way, and using only air transport is not always the fastest and the best way of delivery. Because of that it was decided by many UPU members that the name "AIRMAIL" is no longer suitable and a new name "PRIORITY MAIL" was introduced for this service. Priority mail service assures that the mail item is delivered by the fastest way available for delivery including air transport, railways, automobiles etc. In Israel first priority mail labels were introduced in 2009. It is a very interesting fact that only the English name of the service was changed on the labels and the Hebrew name remained the same .

AIRMAIL LABELS

Airmails labels were printed in several formats which are shown below:

"H"s trips with horizontal perforation only.

Rolls with vertical rouletting

Big sheets with horiz. & vert. perf.

"Running stag" watermark

AML 0

AML 1 from big sheets & H strips

AML 2 different types examples

AML 3 Hebrew spelling changed . Two "1" instead of one like in previous type.

AML 0- British mandate label type perf. 12.5. Continued to be used for several years until stocks exhausted. Shades of blue vary from light blue to dark blue. Pinted in big sheets.

AML 1- "Wings" emblem printed in blue in several formats:

- a) Perf. 13.25 X 11. Printed in big sheets.
- b) Perf. 14. Printed in H strips.
- c) Perf. 11.5. Printed in H strips.
- d) Perf. 11.5. Printed in big sheets

AML 2- With "RUNNING STAG" emblem printed in blue in several types:

- a)Perf. 11.5. Printed in H strips. Shades from dark blue to light blue.
- b)Perf. 14. Printed in H strips. Shades from light & dark blue to greenish blue.
- c)Perf. 14. Printed in H strips on paper with "RUNNING STAG" watermark. Shades from light blue to dark blue.
- d)Perf. 14. Printed in H strips on shiny chalky paper. 3 main shades exist: blue, sky blue, light greenish blue.
- e) Rouletted. Printed in H strips. Grey blue. f)Rouletted. Printed in horiz. rolls . Sky blue.

AML 3- With "RUNNING STAG" emblem printed in blue, but the Hebrew spelling changed two "1" instead of one like in previous type. H strips.

PRIORITY MAIL LABELS

Since the fact that in recent years logistics traffic improved drastically ,the postal services have much more ways for sending mail fast , in a reliable way, and using only air transport is not always the fastest and the best way of delivery. Because of that it was decided by many UPU members that the name "AIRMAIL" is no longer suitable and a new name "PRIORITY MAIL" was introduced for this service. Priority mail service assures that the mail item is delivered by the fastest way available for delivery including air transport, railways, automobiles etc. In Israel first priority mail labels were introduced in 2009. It is a very interesting fact that only the English name of the service was changed on the labels and the Hebrew name remained the same.

ADVICE OF DELIVERY SERVICE

This auxiliary service is available for registered letters, postcards ,printed matter and parcels inside Israel and abroad. With this service, the client can be sure that the recipient has received his shipment, as the sender will receive the original proof of receipt that the recipient has signed. Stamps were used of these advices to pay for the service. It is known to me exactly when the use of stamps was stopped, but probably it happened during the 60s'.

EXPRESS MAIL LABELS

Express mail is an accelerated mail delivery service for which the customer pays a surcharge and receives faster delivery. Express mail is a service for domestic and international mail and is in most countries. In Israel this service is offered to customer by the post office from the fist days of it's operation. During the sorting process such items are sorted, dispatched and delivered first. This service remained mainly unchanged until about 1997 when the use of express label familiar for many years was stopped & the service was divided into a few separate express services.

ECO POST BARCODE LABELS

In 2013 a new international express service called ECO POST was introduced. Items up to 2kg. can be sent using this service. The service is based on EMS service infrastructure and offers tracking on post office website. No signature is required upon delivery.

ECO 1

ECO 1- Multicolor with IPAC logo. Printed on white self adh. paper.

Known printings dates: 1.13, 12.13, 11.14, 2.15, 8.15, 11.15, 8.16

POST 24 – DOAR 24 LABELS

In the beginning 0f 2005 a new domestic postal service called "POST 24" was introduced by the Israel Postal Authority. Regular letters sent using this new service are delivered to most of the localities in Israel within 24 hours. To the rest of localities this kind of mail is delivered in the shortest time possible. Using this service mail-pieces up to 500 gr. can be sent. Since the weight was the only restriction in the beginning many client tried to send large sized and fragile items ,and that is why in march 2008 sending of large sized or fragile items which can not be folded was forbidden. I addition to stamps and envelopes ,special labels for "24 POST" were issued in two sizes. The small label measures 40x19 mm. and the big one measures 120x57mm. The small label can be obtained in almost every post office. The big one is extremely rare and known to me only in mint condition.

EX24SL 1

EX24SL 1-Small format 40x19 mm. With the bottom line text font *italicized*.

Known printing dates: 9.04, 3.06, 10.11

EX24SL 2-Small format 40x19 mm. With the bottom line text font regular.

Known printing dates: 7.06, 01.08, 02.08, 1.09, 12.14, 10.16

EX24SL 2

EX24BL 1

EX24BL 1-Large format 120x57 mm. With the bottom line text font regular.

Known printing dates: 6.11

EXPRESS REGISTERED BARCODE LABELS

Approximately in 1997 the use of barcode labels began for express service. It was a first time the use of barcode labels began on a regular basis. Since the technology was new IPA tried different barcode sizes and fonts and because of that almost each printing of those in the first years was somehow different from the previous one. That is why only a significant changes in design were listed as separate types. Those labels were used as I know for domestic service & for incoming international mail. The orange labels were used for registered express mail and the red one for regular express. The use of those labels was stopped approximately in 2005 after new messengers service division of IPA took the responsibility over all express services. New forms were introduced instead of labels.

INSURED MAIL LABELS

This service enables you to insure the contents of the mail item against the risk of damage, theft or loss. You can insure the contents of packages and of registered letters. The service is provided at all postal units, apart from mobile post routes. Special fee should be paid for each 1000 NIS. of insured value up to maximum 25000 NIS. The service existed during the British Mandate period, bus was discontinued after the establishment of the state of Israel & was possibly renewed only after the creation of the IPS in the late eighties. The exact F.D of the service is not known to me. The fees for this service can be paid by cash or postage stamps & it is available for domestic mail only.

CASH ON DELIVERY SERVICE LABELS

The COD (Cash on Delivery) service enables the sender to send a package or registered mail item and to collect money from the addressee by means of the postal service, upon delivery of the item to the addressee, and the sum of money is then sent to the sender. The service is provided at all postal units. Special fee should be paid for this service in addition to the regular letters/parcels rates. It took several years until COD service was renewed in Israel, but it is available until now only for domestic mail.

C.O.D SPECIAL LABEL FORMS

Special label forms with glue layer on back were issued for parcels & packets .All the needed information was written on those forms.

CODLF 0

CODLF₁

CODLF 2

CODLF 0 - British mandate trilingual C.O.D forms stock remainders were used until israeli ones were printed.

CODLF 1 - Israeli label in Hebrew only with Israel Post logo.

CODLF 2 - Label with Ministry of Communications logo.

C.O.D SPECIAL LABEL FORMS

Special forms for parcels & packets .All the needed information was written on those forms. It is not known in which cases exactly all the forms & labels were used in each case in earlier years since the information is not available now. The interesting fact is that in earlier years postage stamps were used on C.O.D forms & this fact makes them very interesting philatelic items. In our days C.O.D fees can also be paid by stamps, but the stamps should be attached to the letter/parcel and not to the form itself. Modern forms consist of three parts printed on light yellow .The first part is given as a receipt to the sender , the second part is left at the post office & the third part is attached to the letter/parcel.

INTERNATIONAL PARCELS FORMS

International parcels service was not resumed right after the proclamation of independence and it took several months and even years until international parcels service was fully resumed. British mandate forms continued to be used for several years until their stock was exhausted.

PARCEL POST REGISTRATION LABELS

Parcel post registration labels consisted from two parts. The first part was attached to the parcel card and the second part was attached to the parcel. British mandate labels were used until the end of 1954. According to post office circular #25 from 15.12.1954 all old labels had to be sent to the central p.o storage department an from 2.1.1955 only the new Israeli type of labels could be used. Those labels continued to be used almost unchanged until their full withdrawal in the summer of 2000 (p.o circular 177/2000). With the implementation of the computerized barcode registration system it was decided not to print special parcels barcode labels and special forms on which the barcode is included were put in use instead.

Parcel sent from Ben Shemen to Lod on 31.12.1954 the last day of British Mandate type labels.

Parcel sent from Ben Shemen to Lod on 2.1.1955 the last day Israeli type labels

Since parcel post registration labels were used for a long period of time ,many printing were made using different fonts. From the material that I have in my collection I assume that three main types based on the font used for printing of the word "ISRAEL" exist. For cities, localities and organizations with big mail volume labels with printed locality or MPO name were printed. In small postal agencies with small mail volume bank labels with name of the state and parcel number were mostly used. Sometimes the name of the locality was added by the postal agent using rubber handstamp. In the territories occupied by Israel in 1967 parcel post service was resumed some time after the occupation and labels were printed for the different offices. Not much information is known about those labels since such material is very scarce. Most of such material is philatelic & was prepared by Dr. Wallach. Additional research should be made for detailed listing of such labels.

INCOMING PARCELS BARCODE REGISTRATION LABELS

Some of the incoming parcels have problems with the barcodes labels because they were damaged during transportation, are of a wrong format which can not be read by IPC equipment or simple don't have labels with barcodes. In such cases special labels are used on which the parcel number is printed in appropriate IPC format. A few copies are printed and attached to different parcel and customs forms.

Registered parcel label

Instructions in case if parcel can not be delivered.

TAXI POST LABELS

Private taxi companies began carrying mail in Palestine during the early thirties. The Regulations of 1930 clearly claimed for the authorities the right/monopoly to deliver letter mail, which was anything up to 250 grams:

"..... Wherever within Palestine post or post communications are established the Postmaster General possesses, by virtue of the Post Office Ordinance (Chapt.115), the exclusive privilege of carrying from one place to another all letters and performing all the incidental services of receiving, collecting, dispatching & delivering all letters...".

The exclusivity did not extend to parcels, creating some kind of loophole which taxi companies could use describing their handling of "consignments" rather than "letters". It is known that the Post office sometimes enforced the law & taxi drivers ,found to had been taking letters & packets from one town to another for private persons, had been fined. Taxi companies were willing to cooperate with the Post Office, but their offers had not been accepted. The illegal status of this service continued for a few years even after the State of Israel was founded. Only in the early 1950's the Post Office finally acknowledged the existence and value of this service and permitted it , upon payment of a special fee, over and above which the company was free to charge what it would. Additional services like insurance, COD and express were also offered to the public. "Express" service permitted delivery directly to the recipient rather than the recipient having to come to the taxi company office. We almost don't have any official information regarding the fee amount collected for each item. A.H Groten noted in his article that the fee was equal to the cost of normal postage & E. Glassman wrote in his catalog that Post Office charged 100 prutot for each item in the 50's and 25 agorot in 1974 .

Official special Post Office labels indicating the payment of the special fee were issued and began appearing on envelopes about 1953. The exact date of issue of those labels is not known. Post office labels were used to indicate that the charge levied by the Post Office on the service had been paid & that is why can be considered as a kind of special postage stamps. Three main types of taxi are known and will be shown here. Additional subtypes can possibly exist , so if you have unlisted subtype please let me know so I could add it to my listing. Labels TAXI—Ib-d were rouletted by special roulette which resembles perforation.

SECURITY WARNING LABELS

Due to the fact that terrorists began mass use of mail stream in order to send in mail items containing small hidden explosive devices or chemical substances, israeli postal authorities began using from the 1970s special labels to warn the ordinary citizens of possible danger. Those labels were attached to larger envelopes, packets and parcels that could be possibly suspicious. Early labels were tan with red Hebrew lettering, warning citizens not to open letters from unknown origins.

Those labels are used to indicate that item is free from any customs fees.

CFFL 1– Blue printing on sky blue self adh. paper . Imperf.

Known printing dates:5.11

FRANKED FORMS

Franked postal forms are forms on which postage stamps are used to pay fees or dues for different postal services. Four main types of such forms are known to me:

- Investigation concerning lost/ disappeared regular or registered letter, parcel.
- Application for different services like change of address, search for documents or telegrams etc.
- Receipt of payment for stamps/postal equipment .
- Cards for payment of postage due.

Since most of such forms are rarely seen on philatelic market almost nothing is known about them and additional study should be made in order to describe them in detail. Here only a few examples of such items are shown. Any additional information is welcomed.

Application for different services like change of address, search for documents or telegrams etc.

Receipt of payment for stamps, postal stationary or postal equipment .Such receipts were given to the clients on request and special fee was paid using postage stamps for each receipt.

Postage due cards are used to collect postage due fees from senders/or receivers. Sender/receiver has to attach postage stamps on this card and after that send the card to a postmaster. Since those cards were destroyed by the postmaster little is known about them and further study should be done.
